

Important information about waste sifting and recycling

We have established new locations for separating our waste in Wessels Have. In order to make the waste handling work smoothly and hereby to contribute to a more responsible and environment-friendly handling of waste it is important that all sorts of our waste end up in the right containers. For hygienic reasons pls. remember also to close bin liners and garbage bags properly before throwing them into in the refuse chute.

By the way: Not handling our garbage and waste properly, will cause extra work for our janitors, and it definitely will have consequences for Wessels Have's local environment, our hygiene, health, and safety (bacteria; hazardous and toxic substances etc.).

Therefore we kindly are asking you to follow our guide:

Our waste and garbage facilities have gotten new locations

- In the basement, there is a so-called Closed Cabinet for toxic and hazardous waste (Miljøskab) and there are different containers for cardboard, electronics, hard plastic and metal (remember cleaning of plastic and cans). NB Medicine rests or old medicine should be delivered back to pharmacies and not stored in the basement.
- Nearby the entrance to Helsingborggade 13 containers for recycling are awaiting your batteries, paper and newspapers on the plateau. The container for collecting glass for recycling is to be found in the old elevator – remember to empty bottles and jars for food scraps and to avoid any noise when handing in. The neighbors will appreciate this very much.
- Large pieces of garbage (furniture etc.) must be put into the wooden shed in the middle part of the Vennemindevej compound (nearby the playground). Pls. look for the label 'STORSKRALD'. Pls. do NOT place any large pieces into the garbage room in the basement.
- Latest news: We have established a small compost facility for all your garden, flower, and plant garbage from your terraces, logias or balconies (you will find it nearby the northern exit of the parking basement).

Sorting and sifting actually start in our apartments

You do not have to install a lot of different collecting bins in your kitchen in order to be able to sort waste and garbage.

We have installed containers for hard plastic, small electronics, cardboard and metal close to each other in the basement. Batteries, glass and paper containers at the same place (Helsingborggade 13). You can therefore easily plan your waste & garbage delivery tour. In this way you can collect much of the recyclable waste until your tour goes to the appropriate waste and garbage containers.

- Pls check also the Waste and Garbage Sifting Guide on our home page.
